UTILIZATION BASED ON AGE AND GENDER

The following chart depicts PMPM and age gender segregation based upon current utilizing members.

1. Primary Insureds are defined as policyholders that have become NPS cardholders. All pharmacy claims processed by NPS are assigned to the policy of the primary insured and their dependents as they are entitled to the products and services outlined with a plan's RX specifications. Plan census may have changed during the time frame of this NPS report.
 2. Members are defined as the primary insureds and their dependents that may be covered under the plan. A primary insured may have single or family coverage.
 3. Utilizers are the members of a plan that have filed a prescription drug claim request for funding by the plan. Non-utilizers are members that have not filed a prescription drug claim during the time frame.
 4. All member counts, and the calculations utilizing these counts, are based on the Member Months concept. The calculations based on this concept factor in the number of months a member is effective for the reported time period.
 5. Previous calculations. The calculation methodology used by NPS prior to 10/1/2005. Now, plans may use either methodology with member months tracking the more accurate barometer of a plan's experience.

All NPS averages and trends displayed are based on data for 10/01/2016 thru 12/31/2016 for all lines of business.

MEDTRANS 2016

1/1/2016 - 12/31/2016

1. Members utilizing each pharmacy provider are based on the active members in the group for the selected time period.
2. The overall generic utilization rate represents the percent of generic medications compared to all medications.
3. The overall generic substitution rate represents the number of prescriptions filled with a generic versus the total that could be filled with a generic.
4. The formulary compliance rate represents the percentage of prescriptions that were filled with a generic (First Tier) or Preferred Brand Name (Second Tier.)
5. The average brand/generic discount only includes claims processed online.

KEY:

- Members utilizing each healthcare provider are based on the active members in the group for the selected time period.
- The overall generic utilization rate represents the percentage of all prescriptions filled with a generic.
- The overall generic substitution rate represents the number of prescriptions that could have been filled as generics that actually were dispensed with a generic product.
- DAW – Dispense as written – Brand was selected by the physician when a generic was available.
- The formulary compliance rate represents the percentage of prescriptions that were filled with a generic (First Tier) or Preferred Brand Name (Second Tier.)
- Members are defined as the employee or policyholder and the employee's spouse or dependents that are covered under the plan. A policyholder may have single or family coverage. Member counts are total eligible lives. Please note that members in the plan during this time frame may not be effective currently; however their claims activity is presented in order to produce an accurate and reliable picture of the cost analysis.
